Introducing Trex®

•**The Company**: Trex Company, Inc. was founded in 1996 and supplies products throughout the world. Trex is the industry-leading composite materials manufacturer of decking, railing, fencing, and other related outdoor living materials.

• **The Fence Product:** Trex fencing was developed in the early 2000s as a supplement to the highly successful composite decking line.

Trex Company's corporate headquarters are in Winchester, VA and an additional plant is located in Fernley, NV

Why Trex® Fencing?

The naturally beautiful low maintenance fence

Extraordinary design

- Neighbor-friendly (Same look on both sides)
- Board-on-board
- Non-reflecting surface
- Fully private
- Various heights possible

Industry-leading 25 year warranty from the trusted brand

The greenest fence material (96% recycled content)

Strength and durability

- Excellent longevity in all conditions
- Superior to other composites
- Wind rated for over 165 mph
- Residential, commercial, government

Associations Choose Trex® Seclusions® Fencing

- **Low maintenance** and **low replacement** costs
- **Breakage** from careless abuse is significantly lower than others
- Stick-built components allow some **adaption** for association-specific CC&Rs
- **Three color** options to match community themes
- **Grade changes** are easy (stair stepping OR sloping)
- Appealing as both **perimeter** and **interior** fencing

Perimeter fencing never looked so good before!

Upscale design leaves a lasting impression

Color Options

Three color options are available for Trex® Seclusions® composite fencing. Trex retains color as it weathers naturally, which means it does not require painting or staining.

Components

Trex Seclusions® fencing components include: Posts, pyramid or flat post caps, top rails, bottom rail covers, pickets, aluminum bottom rails, and fence brackets.

Fence is designed for 8' sections (center of post to center of post). Shorter lengths can be made by cutting material.

Smart design means very few fasteners required

9'/12' Posts
5"x5"

Top Rail
4"x4.9"x91"

Bottom Rail Cover/Picket
1"x5.75"x91"

Pickets
1"x5.75"x67"

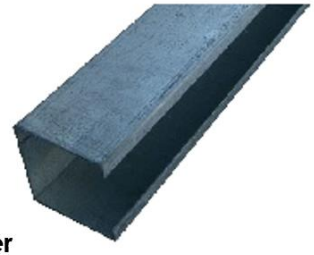
Flat Post Cap
7.5"x2.6"

Pyramid Post Cap
7.5"x3.85"

Aluminum Bottom Rail
2.75"x5.1"x90.5"

Fence Bracket
1.9"x2.7"

Bracket Adapter
(for angles)
2.65"x1.25"



Gate Post Stiffener
3.5"x3.5" approx.

Frequently Asked Questions

- **What's the width on a panel?**
  - Up to 8' on center.
- **Can I get pre-built gates?**
  - Yes, both single and double.
- **How tall will Trex go?**
  - Standard heights are up to 8' tall, but up to 12' is possible.
- **Are the pickets a solid rectangular piece?**
  - Actually, the ingenious design allows the pickets to interlock thereby creating the illusion that they are solid boards. This reduces the weight but maintains the strength of the fence panel while also creating full privacy.
- **Are there a lot of fasteners?**
  - No. There are a total of only 24 fasteners per section; pickets interlock and don't require screws or nails.
- **Will Trex fade?**
  - Yes. Like any product exposed to the elements, a composite will also lighten up over time. However, the wood portion of the composite material deeply absorbs the color and because Trex over-pigments the product during manufacture, the weathered material maintains a rich color value over time.
- **I've heard that composites have had problems like mildew or breaking apart. Is that true?**
  - Trex fencing has performed exceptionally well and has had virtually no warranty claims. It has not experienced problems that other composites or vinyl fences have had with brittleness or de-lamination.
- **Do I have to stair step the fence line or can I slope it?**
  - Trex is a stick-built product. It is easy to slope and the material can be cut like wood.
- **Can I put Trex on a concrete wall?**
  - Yes. The posts are hollow and have an inner dimension of 3.75". The best method is to embed a 2-3/8" Schedule 20 galvanized steel post in the wall and sleeve the Trex post over the top of it. If necessary, add concrete down the hollow of the post for additional rigidity. Attach the brackets prior to adding the concrete to avoid having to put screws through it.

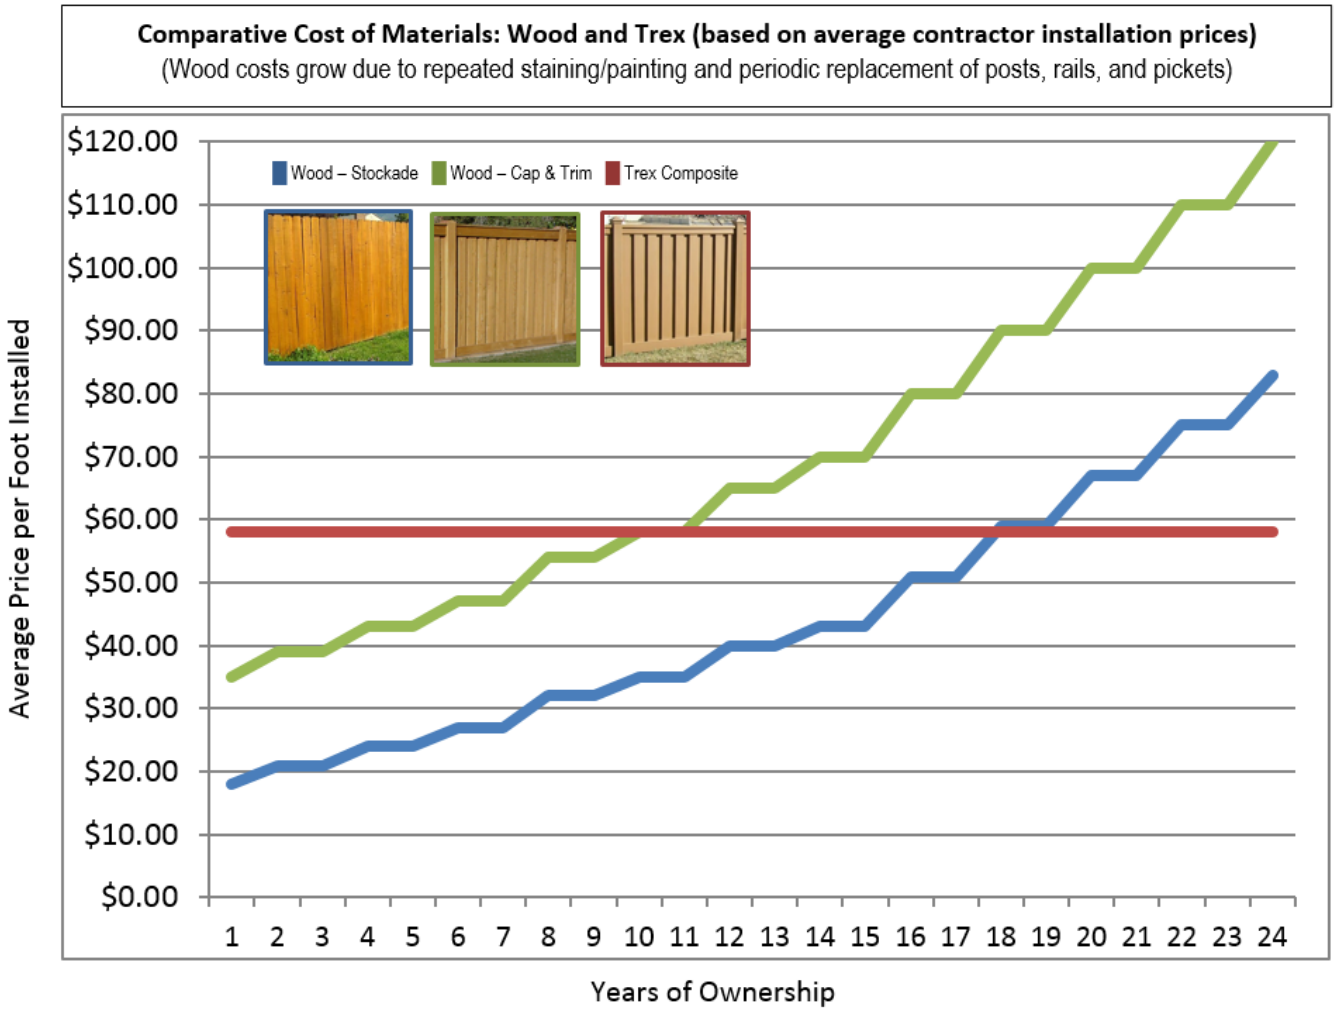
Best Value



Trex is typically a higher initial investment but over time, other fencing will require more maintenance.

Trex will not warp, splinter, or rot, and it is resistant to insects.

It isn't just maintenance expenses. Consider the value of your time over the years.
